TITLE

Liberia Agriculture Census 2024- Household Listing

ABBREVIATION OR ACRONYM

LAC-2024 _HH

COUNTRY

Name	Country code
Liberia	LBR

STUDY TYPE

Agricultural Census [ag/census]

SERIES INFORMATION

The LAC-2024 is an Integrated Census/Survey Modality program conducted in line with the WCA 2020 recommendations. The census also aligned with the objective of the 50x2030 Initiative to Close the Agricultural Data Gap. The conduct of the LAC-2024 is expected to be followed by a series of annual modular agriculture surveys, including the 2024 income, labor and productivity (ILP) and the 2025 production methods and environment (PME) surveys. As part of the census operations, community-level information were collected through focus group discussions with community leaders and other knowledgeable persons within the community.

ABSTRACT

The Government of Liberia and its Development Partners recognized agriculture as a pivotal sector in fostering economic growth, reducing poverty, and achieving food security. Since post-war, the Government in collaboration with development partners, has made substantial investments to develop and expand the agriculture sector. Over the years, policymakers and data users in the agriculture sector have experienced significant challenges in obtaining the requisite data needed to monitor and evaluate these interventions and make informed decisions on new interventions. To address these challenges, the Liberia Institute of Statistics and Geo-Information Services (LISGIS) and the Ministry of Agriculture (MoA) conducted several ad hoc agricultural surveys. While valuable, these surveys have often been limited in scope and unable to provide the comprehensive data needed for effective policymaking and planning. To support the sector more robustly, the government decided to undertake a comprehensive agricultural census.

The Liberia Agriculture Census 2024, the second agricultural census in Liberia since 1971 and the first to be conducted digitally, aimed to collect structural and reliable data on various aspects of the agricultural sector.

The main objectives of the LAC-2024 was to:

- Reduce the existing data gap in Liberia's agriculture sector.
- Provide comprehensive data on the agriculture sector for policy formulation and evaluation of existing programs.
- Enable LISGIS to establish an agriculture master sampling frame for the conduct of future agricultural surveys and research.
- Identify the structural changes in the agriculture sector over time.
- Provide information on crop, livestock, poultry, and aquaculture activities.
- Determine the size, composition, practices and related characteristics of Liberia's agricultural holdings.
- Generate disaggregated agriculture statistics.
- Provide statistics for advocacy in Liberia's agriculture sector.
- Identify agricultural practices and constraints at the community level.

To achieve these objectives, the LAC-2024 was designed to collect structural data at the household, non-household and community levels. The data collected at these three levels provide a wealth of information for understanding the state of agriculture in Liberia. This documentation provides a catalogue of information necessary for understanding how data was collected at the household level. The documentation also provides useful information for understanding the household anonymized dataset.

KIND OF DATA

Census/enumeration data [cen]

UNIT OF ANALYSIS
Agricultural households

Version

VERSION DESCRIPTION

v2.1: Edited, anonymized dataset for public distribution

Data have been edited and anonymized as to be released as Public Use File (PUF).

VERSION DATE

2025-03-10

VERSION NOTES

Version Notes

Version 2.1 (Initial Release of the household anonymized dataset):

This is the first release of the Liberia Agriculture Census 2024 anonymized household dataset under the 50x2030 Initiative. The dataset includes information on agricultural activities, including crop cultivation, poultry and livestock rearing. It also contains information on land use, inputs and tools used, irrigation practices and agricultural household characteristics.

Scope

NOTES

The scope of the Liberia Agriculture Census 2024 household level data collection includes:

Agricultural households and members characteristics, hired labor practices, land use, types of agricultural activities, inputs, tools and equipment used, types and number of livestock and poultry raised.

Coverage

GEOGRAPHIC COVERAGE

National coverage

UNIVERSE

The universe for the Liberia Agriculture Census 2024 household level data collection encompasses:

All households in Liberia having atleast one member engaged in agriculture activity during the 2022/2023 farming season.

Sampling

SAMPLING PROCEDURE

The Liberia Agriculture Census 2024 (LAC-2024) was a sampled census conducted in all 15 counties of Liberia. The sampling frame used for the LAC-2024 is based on the 2022 National Population and Housing Census (2022-NPHC), conducted by the LISGIS. The sample design for the census was a stratified cluster sampling with enumeration areas (EAs) as clusters and farming households as units of interest. In adequacy with budget availability, a large sample of 4,800 EAs was considered for the LAC-2024. These EAs had a total of 269,652 agricultural households in the frame. The sample was allocated in strata (districts, urban/rural) proportionally to the numbers of farming households computed in the frame. In total, about 78.8% of the sample was allocated to rural areas. The stratified sample of EAs was selected with a probability proportional to the number of farming households at EA level.

A complete listing of all households (both agricultural and non-agricultural) was carried out in the selected EAs and detailed questions were addressed to all households that practiced agricultural activities during the 2022/2023 farming season. The results of the LAC-2024 are representative at the district level.

For more information on the LAC-2024 sampling methodology, see the methodology section of the Liberia Agriculture Census 2024 Household Report.

RESPONSE RATE

92.8%.

WEIGHTING

Sampling weights were generated to ensure extrapolation of the agriculture census results at the national, county and districts levels.

For further details on sampling weights, see the methodology section of the Liberia Agriculture Census 2024 Household Report.

Data collection

DATES OF DATA COLLECTION

Start	End
2024-01-22	2024-03-22

DATA COLLECTION MODE

Computer Assisted Personal Interview [capi]

SUPERVISION

The LAC-2024 data collection at the household level was conducted by one hundred and sixty (160) teams. Each team was composed of one supervisor, four enumerators, and one GIS specialist, who doubled up as an enumerator. All teams were deployed to their first EA by regional and national monitors, using LISGIS vehicles. Thereafter, teams were responsible to transport themselves from EAs to EAs using the transportation allowances provided to each team member. A total of 30 data quality assurance officers (two in each county) were deployed to assist teams with technical issues arising from the CAPI Applications. The workings of teams were coordinated by 11 regional and 22 national monitors, who routinely visited teams, provided data quality checks, flagged and corrected potential errors and provided in-field training where necessary. At LISGIS central office, there were 5 monitors, called HQ monitors, who monitored the LAC-2024 dashboard daily and reported all identified errors and inconsistencies to regional and national monitors for appropriate actions.

DATA COLLECTION NOTES

The data collection was carried out from January to March 2024, covering all counties in Liberia. Teams of enumerators conducted interviews using tablets with CAPI (Computer-Assisted Personal Interviewing) software. The process included household interviews, community group discussions, and observational methods. Data collection faced challenges such as difficult terrain and poor internet connectivity, which caused delays in data synchronization. Despite these challenges, supervision and regular quality checks ensured data reliability.

Questionnaires

QUESTIONNAIRES

The LAC-2024 employed three questionnaires: the Household Questionnaire, the Community Questionnaire and the Non-Household Questionnaire. These three questionnaires were based on the 50x2030 Initiative standard model questionnaires. The Liberia Agriculture Census Technical Working Group (LAC-TWG), comprising technical staff from LISGIS, Ministry of Agriculture (MOA), National Fishery and Aquaculture Authority (NaFAA), Cooperative Development Agency (CDA) and the Ministry of Internal Affairs (MIA) worked with technicians from the 50x2030 Initiative to adapt the questionnaires to Liberia's context and realities. Suggestions and inputs were solicited from various stakeholders representing government ministries, commissions and agencies (MACs), nongovernmental and international organizations as well as academic institutions involved with agriculture issues. All questionnaires were finalized in English. Some questions in the questionnaires were translated into simple Liberian English, for the purpose of easy administration.

The household questionnaire include type of agricultural activities practice, household members characteristics, housing conditions, hired labor practice, agricultural parcels and plots characteristics, types of crops and methods of crop cultivation, inputs, tools and equipment use, type and number of livestock and poultry.

The household questionnaire was administered to the household head or an adult member of the household who had vast knowledge of the household and its agricultural activities. The primary respondent (i.e., the household member that

provided most of the information for the questionnaire or a given module, household member, or crop) sometimes varies across modules.

Data Processing

DATA EDITING

The data was edited using CSpro programs, version 7.7.3. The appropriate edit rules were established by programmers and subject matter specialists at LISGIS and MOA.

In few cases, manual editing techniques were applied to recode responses generated from other specify options. The SPSS software was used for this purpose.

METHODOLOGY NOTES

The data were collected using Computer Assisted Personal Interview (CAPI) system. The CSpro application was used to develop the CAPI system. A total of 800 tablets was used for the household level interviews. In addition, some tablets were set aside for replacement of missing, damage or malfunctioning tablets.

During the data collection, team supervisors routinely synchronized their enumerators tablets for transmission of collected data to the LISGIS central server. At the end of the data collection, all tablets used for collecting the household-level data were synchronized by team supervisors while in the field and then by data quality assurance officers at LISGIS central office. The synchronized data were downloaded in spss and stata format, checked for completeness (comparing mapping and enumeration data) and inconsistencies and prepared for editing, tabulation and analysis.

The census technical team developed a tabulation plan before the commencement of the survey, which helped to guide the data editing process, tabulation and analysis.

The dataset was anonymized using statistical disclosure control methods to protect respondent confidentiality while maintaining data utility. The process began with classifying variables into categories: variables to delete, quasi-identifiers, direct identifiers, and linked variables. All direct identifiers and unnecessary variables were removed. Quasi-identifiers and linked variables were analyzed to formulate disclosure scenarios, and disclosure risk was measured using k-anonymity and probabilistic risk techniques. The primary anonymization methods applied included recoding, shuffling, and local suppression. Finally, information loss was assessed to ensure that anonymization methods did not compromise the dataset's utility. The anonymization process was conducted using the R software.

Access policy

CONFIDENTIALITY

Confidentiality of respondents is guaranteed by the National Statistics and Geo-Information Act of Liberia, enacted 2004 and the United Nations Fundamental Principles on Official Statistics, specifically principle six. Before being granted access to the dataset, all users have to formally agree: 1. To make no copies of any files or portions of files to which s/he is granted access except those authorized by LISGIS. 2. Not to use any technique in an attempt to learn the identity of any person, household, non-household or community not identified on public use data files. 3. To hold in strictest confidence the identification of any establishment or individual that may be inadvertently revealed in any documents or discussion, or analysis. Such inadvertent identification revealed in her/his analysis will be immediately brought to the attention of the data depositor.

ACCESS CONDITIONS

The dataset has been anonymized and is available as a Public Use Dataset. It is accessible to all for statistical and research purposes only, under the following terms and conditions:

1. The data and other materials will not be redistributed or sold to other individuals, institutions, or organizations without the written agreement of LISGIS.
2. The data will be used for statistical and scientific research purposes only. They will be used solely for reporting of aggregated information, and not for investigation of specific individuals or organizations.
3. No attempt will be made to re-identify respondents, and no use will be made of the identity of any person or establishment discovered inadvertently. Any such discovery would immediately be reported to LISGIS.
4. No attempt will be made to produce links among datasets provided by LISGIS, or among data from LISGIS and other datasets that could identify individuals or organizations.

5. Any books, articles, conference papers, theses, dissertations, reports, or other publications that employ data obtained from LISGIS will cite the source of data in accordance with the Citation Requirement provided with each dataset.
6. An electronic copy of all reports and publications based on the requested data will be sent to LISGIS.

The original collectors of the data, LISGIS, MOA, and the relevant funding agencies bear no responsibility for use of the data or for interpretations or inferences based upon such uses.

Country	Liberia
Language	English
Contributor(s)	Ministry of Agriculture, UNFAO & World Bank
Publisher(s)	Liberia Institute of Statistics and Geo Information Services (LISGIS)
Description	This report presents the main results of the LAC-2024 household sector. Its objective is to provide deeper understanding on the socio-demographic characteristics of agricultural households in Liberia and the various agricultural activities practiced by these households. The report also presents the various forms of labor, inputs, tools and equipment used by Liberia's agricultural households.

Abstract	<p>The Liberia Agriculture Census 2024 (LAC-2024) is a landmark initiative aimed at providing comprehensive, reliable, and up-to-date data on the structure and characteristics of Liberia's agricultural sector. This census is crucial for evidence-based policymaking, investment planning, and monitoring of the agricultural sector's performance.</p> <p>Liberia's agricultural sector remains a vital component of the national economy, employing a significant portion of the population and serving as a key driver of food security, rural livelihoods, and economic growth. However, the sector faces numerous challenges, including outdated data on agricultural holdings, limited information on farming practices, and a lack of precise statistics on livestock, fisheries, and forestry. The census seeks to address these data gaps by leveraging digital tools and international best practices, ensuring that the country's agriculture policies and development programs are based on accurate and timely information.</p> <p>The LAC-2024 represents Liberia's first fully digital agriculture census, utilizing Computer-Assisted Personal Interviewing (CAPI) technology to enhance data quality and efficiency. It aligned with the methodological framework recommended by the Food and Agriculture Organization (FAO) and was supported by the World Bank's Harmonizing and Improving Statistics in West Africa (HISWA) Project and the 50x2030 Initiative.</p> <p>DATA SOURCES AND AVAILABILITY i</p> <p>RELATED LINK i</p> <p>CITATION REQUIREMENT AND FORMAT GUIDANCE i</p> <p>TABLE OF CONTENTS ii</p> <p>FOREWORD iii</p> <p>PREFACE iv</p> <p>LIST OF TABLES v</p> <p>LIST OF FIGURES vi</p> <p>LIST OF APPENDICES vii</p> <p>LIST OF ABBREVIATIONS AND ACRONYMS vii</p> <p>EXECUTIVE SUMMARY viii</p> <p>INTRODUCTION 1</p> <p>DEFINITION OF KEY TERMS 3</p>
